no. maintenance	Responsible	Check interval Frequency	Check / Clean / Lubricate Check/Clean/lubricate	Oil/Grease Oil/grease	Photos	Comment	Documentation: documentation
W 1	Maintenance	1x per month	Check the movable guard on the winding spindles.			Function test of machine safety door, if door open-->machine does not start	in the machine maintenance plan and the maintenance overview
	MAINTENANCE	1X/MONTH	Check the movable guard on the bobbin spindles.			Function test of machine safety door, if door open-->machine does not start	In the maintenance plan /machine maintenance table
W 2	Maintenance	1x per month	Check all thread brakes on the bobbin creel			When the axis is touched, it must return to its starting position.	in the machine maintenance plan and the maintenance overview In the maintenance plan /machine maintenance table
	MAINTENANCE	1X/MONTH	Check all thread brakes on the bobbin holder			When touched, the axis must return to its initial position	
W 2			Check thread guide and deflection elements for damage.			No damage: Unobstructed wire passage	in the machine maintenance plan and the maintenance overviewwin the machine maintenance plan/maintenance table
			Check the thread guide and deflection elements for damage.			No damage: Unobstructed wire passage Visual and tactile inspection	
W 2						The eyelets are located at the level of: Bobbin feed The eyelets are located at the level of: bobbin feed winding machine	
W 3	Maintenance	1x per month	Check bobbin winding stroke for smooth operation, lubricate the sliding rods of the transport carriage.	Berner high-performance lubricant		Limit switch: The axis must return to its starting position when touched. Machine test	in the machine maintenance plan and the maintenance overview
	MAINTENANCE	1X/MONTH	Check the bobbin winding stroke for smooth operation, sliding rods	Berner high-performance lubricant		Limit switch sensor: when touched the axis must return to its initial position Test on machine	in the machine maintenance plan/maintenance table
			Lubricate the transport carriage.			Rods and gears must be lubricated	

no.:	Responsible:	Check interval:	Check / Clean / Lubricate	Oil/Grease	Photos	Comment	Documentation:
maintenanc	Responsible	Frequency	Check/Clean/lubricate	Oil/grease			documentation
W 4	Maintenance	1x per month	Check the air pressure gauge and air pressure system, check the oil level in the lubrication piston, top up if necessary, drain condensation water.	Toolcraft pneumatic oil type S		Pressure gauge: Check the status zero - change - stabilization. Check the oil level in the piston, see "min-max". Venting at the air pressure system level	in the machine maintenance plan and the maintenance overview
	MAINTENANCE	1X/MONTH	Check the air pressure gauge and the air pressure system, oil level in the lubrication piston	Toolcraft pneumatic oil type S		Pressure gauge: check the status zero - variation - stabilization Check the oil level in the piston, see "min-max" indication Venting at the air pressure system level	in the machine maintenance plan/maintenance table
W5	Maintenance	1x per month	check the function of the thread sensor			cut the thread to test	in the machine maintenance plan
	MAINTENANCE	1X/MONTH	check the function of the thread sensor			cut the thread to test	in the machine maintenance plan
W6	Maintenance	1x per month	Clean the ventilation grille on the winding machine, check V-belt for correct tension and wear, check oil level in the reverse gear, top up if necessary.	Bernier high-performance lubricant	  	*Check visually *Check status; touch *Functionality test*Check visually *Check the condition; by touch *Functionality test	in the machine maintenance plan and the maintenance overview
	MAINTENANCE	1X/MONTH	Clean the ventilation grille of the winding machine. Clean the ventilation grille of the winding machine Check the V-belt for tension and wear, check the tension and wear of the V-belt, Check the oil level in the reverse gear and top up if necessary. check the oil level in the reverse gear and top up if necessary.				in the machine maintenance plan/maintenance table in the machine maintenance plan and the maintenance overview in the machine maintenance plan/maintenance table
W 7	Maintenance	1x per year	Replace the ventilation grille on the winding machine.			1 time / year, for information only	in the machine maintenance plan and the maintenance overview
	MAINTENANCE	1X/year	replace the ventilation grille of the winding machine.			check the condition of the grille for damage	in the machine maintenance plan/maintenance table
